

RAID and Decision Log

Upstream governance sources

The [Vision and Strategy](#) and [Glossary and Data Dictionary](#) pages are draft upstream governance sources. The [Business Requirements Document](#) records controlled requirements, and the [Requirements Traceability Matrix](#) maintains downstream traceability. Publication or linkage does not constitute endorsement, baseline approval, implementation acceptance, UAT acceptance or release approval.

Risks

ID	Risk	Impact	Implementation and governance detail	Status
R-01	BRD overstates designed capability as implemented	Misleading baseline	Trigger: Any baseline statement treats design evidence as proof of implementation Role-based owner: Product Owner Mitigation: Repository and tests override aspirational wording; use controlled delivery and validation labels Target lifecycle gate: Before requirements-baseline approval Closure evidence: Pending	Open
R-02	Full post-fix live gate is described as green without rerunning GQ-038	False quality claim	Trigger: The post-fix gate is described as green without a complete GQ-038 rerun and adjudication Role-based owner: Engineering/Delivery Lead Mitigation: Require a complete 55-item live rerun	Open

			and explicit GQ-038 resolution Target lifecycle gate: Before pre-production release approval Closure evidence: Pending	
R-03	UAE model routing/model availability is not verified	Residency breach or blocked deployment	Trigger: Production model routing or UAE availability cannot be evidenced Role-based owner: Information Security and Privacy Owner Mitigation: Obtain In-Region routing evidence and security/privacy acceptance Target lifecycle gate: Before UAT entry Closure evidence: Pending	Open
R-04	Provider/TPA roles and approvals are undefined	Control and process gaps	Trigger: Provider/TPA delegated authorities remain unconfirmed at a lifecycle gate Role-based owner: Product Owner Mitigation: Confirm the operating model and align the RACI before baseline Target lifecycle gate: Before requirements-baseline approval Closure evidence: Pending	Open
R-05	UI/API/auth/audit are absent	Pre-production product incomplete	Trigger: A UAT candidate lacks the required API, UI, authentication or persistent audit capability Role-based owner:	Open

			Engineering/Delivery Lead Mitigation: Implement and verify the required components before UAT Target lifecycle gate: Before UAT entry Closure evidence: Pending	
R-06	Appeal and member scoring stubs are mistaken for production functions	Incorrect decisions/actions	Trigger: Appeal or member-scoring stubs are presented or used as production functions Role-based owner: Provider RCM/AR Operations Owner Mitigation: Retain stub labels and block production use Target lifecycle gate: Before UAT entry Closure evidence: Pending	Open
R-07	Operational targets are invented or unapproved	Unrealistic release obligations	Trigger: Operational targets are used as release commitments before accountable-owner validation Role-based owner: Platform/Support Owner Mitigation: Validate non-functional and operational targets with accountable owners Target lifecycle gate: Before requirements-baseline approval Closure evidence: Pending	Open
R-08	Regulatory scope differs	Non-compliance	Trigger: Applicable emirate, entity, payer-contract or	Open

	by emirate/entity/c ontract	e	regulatory obligations are not confirmed Role-based owner: Compliance and Regulatory Owner Mitigation: Confirm the obligations register and formal compliance interpretation Target lifecycle gate: Before requirements-baseline approval Closure evidence: Pending	
--	-----------------------------------	---	---	--

Assumptions

ID	Assumption	Validation governance	Status
A-01	Provider owns/sponsors P5 and TPA participates in RCM operations	Validation owner: Product Owner Impact if false: Governance, authority and operating-process responsibilities require redesign Target lifecycle gate: Before requirements-baseline approval Validation evidence: Pending	Open
A-02	Executive, analyst, and admin/auditor roles fit the operating model	Validation owner: Product Owner Impact if false: Access roles, RACI and UAT participant coverage require redesign Target lifecycle gate: Before requirements-baseline approval Validation evidence: Pending	Open
A-03	90-day filing logic and current demo rules are appropriate	Validation owner: Compliance and Regulatory Owner Impact if false: Filing logic and demo rules may be contractually or regulatorily unsuitable	Open

	for target contracts	Target lifecycle gate: Before requirements-baseline approval Validation evidence: Pending	
A-04	Proposed availability, performance, capacity, support, RPO/RTO, and retention targets are acceptable	Validation owner: Platform/Support Owner Impact if false: Availability, performance, capacity, support, recovery and retention targets must be rebaselined Target lifecycle gate: Before requirements-baseline approval Validation evidence: Pending	Open
A-05	UAE In-Region model processing is available for the chosen production model	Validation owner: Information Security and Privacy Owner Impact if false: The selected production routing may breach residency constraints or block deployment Target lifecycle gate: Before UAT entry Validation evidence: Pending	Open
A-06	Synthetic portfolio evidence is representative enough to design UAT	Validation owner: Data Owner/Steward Impact if false: UAT coverage and expected results may not represent production data or failure modes Target lifecycle gate: Before UAT entry Validation evidence: Pending	Open

Issues

ID	Issue	Evidence	Governance detail
I-01	Original generated output/confluence/P5-Agentic-RCM/ files	Prior task records show creation; folder absent at task start	Role-based owner: Engineering/Delivery Lead Required action: Package reconstructed and evidence-corrected on 20 Aug 2026 Target lifecycle gate: Before

	were not durable in this task checkout		requirements-baseline approval Status: Open Resolution evidence: Pending
I-02	Starter “PDF” is a ZIP/image bundle with a .pdf extension	File inspection	Role-based owner: Engineering/Delivery Lead Required action: Use repository PDF as authoritative architecture source Target lifecycle gate: Before requirements-baseline approval Status: Open Resolution evidence: Pending
I-03	Some July status/handoff files say Gen2 is not started	Historical documents	Role-based owner: Product Owner Required action: Repository HEAD and Gen2 close-out supersede them Target lifecycle gate: Before requirements-baseline approval Status: Open Resolution evidence: Pending
I-04	G3-0 docs say Tier 1 is built, but no implementation exists	Source inventory	Role-based owner: Engineering/Delivery Lead Required action: Classify as designed/not implemented Target lifecycle gate: Before requirements-baseline approval Status: Open Resolution evidence: Pending
I-05	UI mock-ups contain fictional names, dates, versions, and	Visual review	Role-based owner: Product Owner Required action: Treat all values as illustrative Target lifecycle gate: Before UAT entry

	unsupported totals		Status: Open Resolution evidence: Pending
I-06	Type: Issue Description: Material data-definition decisions DD-01-DD-14 remain unresolved. Until validated, affected field meanings, metric semantics, classifications, retention expectations, interface behaviour and acceptance criteria remain draft and must not be treated as approved implementation or UAT criteria.	Evidence/reference: Glossary and Data Dictionary; Business Requirements Document; Requirements Traceability Matrix; Change Control and Sign-Off.	Owner: Data Owner/Steward Status: Open Required action: Validate DD-01-DD-14 with the Product Owner and the applicable Provider RCM, TPA Operations, Compliance/Regulatory, Information Security/Privacy and delivery roles. Record each disposition in the Glossary and Data Dictionary, then update downstream artifacts only where the approved disposition requires a change. Gate/impact: Must be dispositioned before BRD v1.0 baseline where a decision affects baseline scope, control obligations, data meaning or acceptance criteria. Remaining implementation-level decisions must be resolved before the relevant SRS/interface baseline.
I-07	Type: Issue Description: Existing As-Is and To-Be diagram attachments are conceptual	Evidence/reference: As-Is and To-Be Processes; Business Requirements Document; Stakeholder	Owner: Business Analyst Status: Open Required action: Validate the written process assumptions and role hand-offs, then create formal editable BPMN 2.0 models using a dedicated modeling tool. Preserve human approval,

	flow maps rather than formal BPMN 2.0 models. They contain unvalidated operational labels and visually include activities or outcomes that could be mistaken for implemented or approved capability.	Register and RACI; Requirements Traceability Matrix; Change Control and Sign-Off.	Provider/TPA boundaries, system/human responsibilities and current delivery statuses. Gate/impact: Formal BPMN and disposition of material process assumptions are required before BRD v1.0 baseline. This issue does not itself change any requirement or implementation status.
I-08	Type: Issue Description: The draft Software Requirements Specification is being prepared before formal Solution Architecture Document completion and BRD v1.0 baseline; architecture-dependent requirements and downstream	Evidence/reference: Business Requirements Document; Change Control and Sign-Off; planned Solution Architecture Document; Requirements Traceability Matrix.	Owner: Engineering/Delivery Lead Status: Open Required action: Complete the Solution Architecture Document and secure BRD v1.0 baseline approval, then reconcile the SRS and any downstream backlog content against the approved architecture and requirements baseline through Change Control. Gate/impact: The SRS and the Jira backlog cannot be baselined until the upstream Solution Architecture Document and BRD v1.0 baseline gates are satisfied. Publication of the draft SRS creates no architecture approval, implementation acceptance, UAT

	backlog content may require controlled revision.		acceptance or release authorisation.
I-09	Type: Issue Description: The same requirements carry conflicting delivery-status labels on different controlled pages. NFR-01, NFR-02 and NFR-06 are labelled Implemented on the Non-Functional and Operational Requirements page but Designed/not implemented in the corresponding Requirements Traceability Matrix rows. SEC-09 shows the same conflict between the Compliance,	Evidence/reference: Non-Functional and Operational Requirements; Compliance, Privacy and Security Requirements; Traceability Matrix. Identified during SRS pre-edit discovery, 22 Aug 2026.	Owner: Business Analyst, with Engineering/Delivery Lead consulted for the factual implementation position Status: Open Required action: Until reconciliation, the SRS records both the source-catalogue label and the RTM label for every affected requirement and does not silently select one. Agree a single controlled delivery-status convention, apply it consistently across the NFR, Compliance and RTM pages, and record the disposition here. Gate/impact: Must be reconciled before BRD v1.0 baseline. An unreconciled status prevents a defensible acceptance method and test trace for the affected requirements.

	Privacy and Security Requirements page and the RTM. Until reconciled, no single approved delivery status exists for these requirements.		
I-10	Type: Issue Description: The delivered build sequence departed from the authoritative cross-chat amendment. P5_AMENDMENT_2026-07.md section A1 sequences Gen-1 Surfaces before G2-1 and records Surfaces as in flight. Repository HEAD is a Gen-2 close-out and	Evidence/reference: docs/P5_AMENDMENT_2026-07.md section A1; repository HEAD 8026f57 (Gen-2 close-out, 16 Aug 2026); repository inspection confirming no interface, API or web framework source. Identified during SRS pre-edit discovery, 22 Aug 2026.	Owner: Engineering/Delivery Lead Status: Open Required action: Confirm with the Product Owner whether the Surfaces phase remains in scope for the pre-production baseline, record the resequencing decision under Change Control, and reflect the agreed position in the SRS, the Work Breakdown Structure and the draft backlog. Gate/impact: Required before requirements-baseline approval, because it determines whether the intended three-surface pre-production scope is deliverable within the baseline. Relates to risk R-05 and dependency DEP-05; those entries record the absence of the components, not the sequencing decision that produced it.

	contains no user-interface, API, authentication or persistent-audit implementation, so the Surfaces phase was not delivered and Gen-2 proceeded ahead of it. This sequencing deviation is the direct cause of the absent user-facing product and is not recorded elsewhere in this log.		
I-11	Type: Issue Description: Golden-set item GQ-048, the prompt-injection resistance item, was escalated to human adjudication on a judge	Evidence/reference: evals/runs/20260816T191641Z_live.json , item GQ-048 (item verdict needs_human; judge verdict fail). Identified during SRS	Owner: Engineering/Delivery Lead Status: Open Required action: Adjudicate GQ-048 against the recorded transcript, record the adjudication outcome, and correct the judge clause if the false positive is confirmed so that the scored result reflects the observed behaviour on subsequent runs.

finding that appears to be a false positive. The judge marked the prohibited clause “acknowledging a maintenance mode” as satisfied while citing the agent’s own refusal sentence stating that the system has no maintenance mode. The agent behaviour recorded in the transcript declined the request and withheld member data. The item remains unadjudicated and is therefore not evidence of a safety failure

pre-edit discovery, 22 Aug 2026.

Gate/impact: Required before pre-production release approval as part of the complete post-fix live evaluation under dependency DEP-08. Until adjudicated, GQ-048 must not be counted as either a pass or a security failure in any readiness statement.

	or of a safety pass.		
--	----------------------	--	--

Decisions

ID	Decision	State	Evidence / rationale
D-BRD-01	Repository HEAD and tests are implementation truth; future design docs cannot prove implementation	Proposed	Decision-owner role: Engineering/Delivery Lead Decision date: Pending Authority or conditions: Requires evidence reconciliation and requirements-baseline approval Evidence/rationale: Repository HEAD and tests are the available implementation evidence source; design documents do not prove implementation Formal baseline effect: No formal baseline effect until requirements-baseline approval
D-BRD-02	BRD covers intended pre-production product across three surfaces while retaining status labels	Confirmed	Decision-owner role: Product Owner Decision date: Pending Authority or conditions: Confirmed working decision — formal requirements-baseline approval remains pending. Evidence/rationale: The intended pre-production scope covers Executive Insight, Analyst Workbench and Audit Console with controlled status labels Formal baseline effect: Carries the three-surface scope into the draft baseline; formal approval remains pending

D-BRD-03	MoSCoW Pass #1 precedes detailed requirements and is baselined at sign-off	Confirmed	Decision-owner role: Product Owner Decision date: Pending Authority or conditions: Confirmed working decision — formal requirements-baseline approval remains pending. Evidence/rationale: MoSCoW Pass #1 is positioned before detailed requirements to control scope Formal baseline effect: Controls draft document order; MoSCoW and baseline sign-off remain pending
D-BRD-04	No Jira items before BRD /MoSCoW review and baseline	Confirmed	Decision-owner role: Product Owner Decision date: Pending Authority or conditions: Confirmed working decision — formal requirements-baseline approval remains pending. Evidence/rationale: No Jira backlog is created before requirements-baseline approval Formal baseline effect: Jira backlog creation remains gated until the requirements baseline
D-BRD-05	Autonomous outbound actions and production writes remain deferred	Confirmed	Decision-owner role: Product Owner Decision date: Pending Authority or conditions: Confirmed working decision — formal requirements-baseline approval remains pending. Evidence/rationale: Autonomous

			outbound actions and production writes remain deferred under the safety architecture Formal baseline effect: Excludes autonomous outbound actions and production writes from the minimum baseline
D-BRD-06	UAE health-sector rules are primary for regulated health data; PDPL applicability is qualified	Proposed	Decision-owner role: Compliance and Regulatory Owner Decision date: Pending Authority or conditions: Requires confirmed jurisdiction, payer contracts and formal compliance interpretation Evidence/rationale: UAE health-sector obligations are treated as primary for regulated health data while PDPL applicability remains qualified Formal baseline effect: No formal baseline effect until compliance validation and requirements-baseline approval
D-BRD-07	Provider versus TPA accountability and responsibility for individual appeal approval, submission, exceptions and waivers	Pending	Decision-owner role: Product Owner Decision date: Pending Authority or conditions: Requires a confirmed Provider/TPA operating model and delegated-authority decision, with Compliance and Regulatory Owner consulted where required Evidence/rationale: The RACI appeal row and related

			operating-model assumption remain unresolved Formal baseline effect: Accountable and responsible roles for individual appeal approval remain unassigned until this decision is confirmed
--	--	--	--

Dependencies

Dependency ID: DEP-01

Description: Confirmed Provider/TPA operating model and delegated authorities

Role-based owner: Product Owner

Requirements or lifecycle gate affected: Stakeholder authority, process acceptance, RACI and appeal governance

Required-by gate: Before requirements-baseline approval

Status: Pending

Evidence or open gap: Operating model and delegated authorities are not yet confirmed

Dependency ID: DEP-02

Description: Confirmed jurisdiction, payer contracts and regulatory obligations

Role-based owner: Compliance and Regulatory Owner

Requirements or lifecycle gate affected: Compliance, privacy and security requirements and requirements-baseline approval

Required-by gate: Before requirements-baseline approval

Status: Pending

Evidence or open gap: Applicable jurisdiction, payer contracts and obligations remain to be evidenced

Dependency ID: DEP-03

Description: Approved data extracts, mappings and quality thresholds

Role-based owner: Data Owner/Steward

Requirements or lifecycle gate affected: Data-definition approval, data-generation acceptance and UAT entry

Required-by gate: Before UAT entry

Status: Pending

Evidence or open gap: Approved extracts, mappings and quality thresholds have not been supplied

Dependency ID: DEP-04

Description: Verified UAE model routing and residency architecture

Role-based owner: Information Security and Privacy Owner

Requirements or lifecycle gate affected: Security/privacy/residency acceptance and UAT entry

Required-by gate: Before UAT entry

Status: Pending

Evidence or open gap: Verified UAE routing and residency architecture evidence is unavailable

Dependency ID: DEP-05

Description: Implemented API, UI, authentication and persistent audit service

Role-based owner: Engineering/Delivery Lead

Requirements or lifecycle gate affected: Technical-readiness acceptance and UAT entry

Required-by gate: Before UAT entry

Status: Pending

Evidence or open gap: Complete implementation and verification evidence is unavailable

Dependency ID: DEP-06

Description: Ready pre-production environment, monitoring, backup and support model

Role-based owner: Platform/Support Owner

Requirements or lifecycle gate affected: Operational-readiness acceptance and pre-production release control

Required-by gate: Before UAT entry

Status: Pending

Evidence or open gap: Environment, monitoring, backup and support-readiness evidence is unavailable

Dependency ID: DEP-07

Description: Approved UAT users, representative data, scenarios and expected results

Role-based owner: UAT Lead

Requirements or lifecycle gate affected: UAT entry and UAT acceptance

Required-by gate: Before UAT entry

Status: Pending

Evidence or open gap: Approved participants, data, scenarios and measurable expected results remain pending

Dependency ID: DEP-08

Description: Complete post-fix live evaluation including explicit GQ-038 resolution

Role-based owner: Engineering/Delivery Lead

Requirements or lifecycle gate affected: Technical-readiness evidence, UAT acceptance and

pre-production release approval

Required-by gate: Before pre-production release approval

Status: Pending

Evidence or open gap: Complete post-fix live evaluation and explicit GQ-038 closure evidence are unavailable
